Dear ASQ Biomedical Division members:

I am writing because I am very interested in obtaining an internship within the Biomedical Engineering field for the summer of 2007. I am looking for an internship relating to medical device research or pharmaceutical type research. A position of this sort appeals to me because of my strong interest in molecular biology, chemistry and medical devices. In addition, I am eager to apply the knowledge I have gained through my science and engineering courses for practical uses.

I am currently a junior at Western New England College in Springfield, MA working on my Bachelor of Science degree in Biomedical Engineering with a Concentration in life science. I am also working on a minor in Chemistry. My strengths include being a self-motivated hard worker and a valuable team member. As an engineering student, I am often required to work with a team on various projects. This requires me to coordinate my efforts and collaborate with other team members to complete the project on time. I am also able to conduct laboratory experiments and projects on my own with little to no instruction as is evident from the research internship in Polymer Science that I completed this past summer. In addition, I have been able to successfully maintain an excellent grade point average while remaining involved in professional societies and campus clubs. These skills, combined with my educational background in biology, chemistry, and engineering, makes me an ideal candidate for an internship position at a biomedical related company.

My future goals upon graduation are to obtain a laboratory position at either a pharmaceutical or a medical device company. I hope to get my masters degree after obtaining a job in industry.

Enclosed please find a current copy of my resume. If you should have any questions regarding my skills, and how they fit with your company, please contact me. You can also reach me by e-mail at afeldma0@yahoo.com. Thank you for your time. I look forward to hearing from you soon.

Sincerely,

Amanda Feldman
